

Computational Linguistics (CL3.101)

Summer 2021, IIIT Hyderabad

26 May, Wednesday (Lecture 2)

Taught by Prof. Radhika Mamidi

Applied Linguistics

In India, core linguistics refers to phonology, morphology, syntax, etc. and applied linguistics typically includes sociolinguistics, lexicography, anthropological linguistics, psycholinguistics, etc. However, in the Western school, these fields come under the “application of linguistics”, and applied linguistics refers only to language teaching.

Linguistics in general is simply the scientific study of human language.

Levels of Language Processing

- Phonology
- Morphology
- Syntax
- Discourse Analysis
- Semantics
- Pragmatics

Model of Language Processing

The various stages of processing are

- lexical processing,
- syntactic processing,
- semantic processing, and
- discourse processing,

in that order.
